PRESENTATION RUBRIC

Open-Data Intelligence for Distributed Solar Development

15-Minute Presentation + 5-Minute Q&A | 100 Points Total

HOW TO USE THIS RUBRIC

This rubric applies to the 20-minute hackathon slot (15 min present + 5 min Q&A). Each criterion is scored independently. Evaluators should complete the 'Notes' column before assigning points — scores without written justification will not be accepted.

Scores reflect understanding, not polish. A rough demo with clear reasoning outscores a slick deck with shallow analysis.

Evaluation Breakdown at a Glance

Section	Points	Weight
Problem Understanding & Framing	15	15%
Solution Design & Architecture	20	20%
Working Prototype & Live Demo	18	18%
Data Handling & Audit	18	18%
Insights, Findings & Scoring	18	18%
Presentation Quality	12	12%
Q&A & Team Depth	10	10%

FULL RUBRIC

Category	Criteria	Pts	Evaluator Notes
1. Problem Understanding & Framing			
Accuracy	Correctly interprets the core challenge: building a holistic intelligence model for distributed solar in a Global South country, not just a data-collection exercise.	5	
Scope control	Stays focused — does not over-generalise or address a tangentially related problem.	5	
Country selection	Clearly states chosen country (India / Malaysia / Mexico / Brazil) and justifies the selection with at least one concrete data-availability or market rationale.	5	
2. Solution Design & Technical Architecture			
Pipeline clarity	Explains the end-to-end data pipeline: ingestion, processing, model/analysis layer, and output generation. Audience can follow the flow without confusion.	8	
Generative AI integration	Demonstrates meaningful use of LLMs or generative AI techniques (RAG, agents, summarisation, query rewriting, etc.) rather than treating them as decoration.	8	
Design decisions	Justifies key choices — why this model, this data source, this output format. Shows awareness of trade-offs.	4	
3. Working Prototype & Live Demo			
Functionality	Prototype runs and produces meaningful output. At minimum, one complete country case study is shown end-to-end.	10	
Demo quality	Demo is clear, purposeful, and rehearsed. Highlights the most valuable capability of the system, not just that it runs.	5	

Resilience	Team has a backup plan (screenshots or pre-recorded video) if live demo fails.	3	
4. Data Handling & Availability Audit			
Source breadth	Uses diverse public data sources across multiple dimensions (cost, grid, policy, incentives, approval signals). Does not rely on a single source type.	6	
Audit completeness	Explicitly reports: (a) what was found and used, (b) what was missing, and (c) how gaps affect decision-making. This is a required deliverable.	8	
Methodology	Describes how the model can be updated as new data becomes available or when extended to a new country.	4	
5. Insights, Findings & Scoring Layer			
Quality of insight	Goes beyond describing data — draws non-obvious conclusions. Identifies at least one 'unknown unknown' (a risk or constraint not predefined in the brief).	8	
Visualisations	Charts, maps, or dashboards are accurate, readable, and add explanatory value. Not just decorative.	5	
Scoring/feasibility layer	Provides a mechanism (score, risk rating, comparative index) to help interpret results — even a simple, well-justified one.	5	
6. Presentation Quality & Communication			
Structure & timing	Follows logical arc; fits within 15 minutes. Spends proportional time on each section — not 10 minutes on background.	5	
Slide clarity	Slides support speech, not replace it. One clear idea per slide. No walls of text.	4	
Delivery	Confident and clear. Every team member speaks. Non-technical concepts explained accessibly.	3	
7. Q&A & Team Depth			

Responsiveness	Answers questions accurately and honestly. Admits uncertainty rather than bluffing.	5	
Depth	Every team member can explain core decisions, not just their individual sub-task.	5	
TOTAL SCORE		100	/ 100

AUTOMATIC DEDUCTIONS

- **-10 pts:** No working prototype shown and no pre-recorded backup provided
- **-5 pts:** Data availability audit entirely absents from presentation and documentation
- **-5 pts:** Presentation runs more than 2 minutes over the 15-minute presentation limit (Q&A time is separate)
- **-5 pts:** Only one team member speaks (all members must present)

Evaluator: _____ Date: _____ Team: _____
