SLIDE TEMPLATE OUTLINE

Open-Data Intelligence for Distributed Solar Development

15-Minute Presentation + 5-Minute Q&A

HOW TO USE THIS TEMPLATE

This document sets out the time budget and required content areas for the hackathon presentation. Your team decides how to structure, order, and design your slides. The time budget below shows how to weight your 15 minutes. The content checklist further down shows what must appear somewhere in your presentation.

Keep your deck focused. Judges respond poorly to presentations that run long or rely on too many slides to make a simple point.

Time Budget at a Glance

#	Section	Time	Key Goal
1	Title Slide	0:30	<i>Orient the audience</i>
2	Problem Framing	1:30	<i>Show you understand the real challenge</i>
3–4	Solution Architecture	3:00	<i>Explain what you built and why</i>
5–7	Live Demo & Results	4:00	<i>Show it working on your chosen country</i>
8	Key Findings & Insights	1:30	<i>The most important things you discovered</i>
9	Data Availability Audit	1:00	<i>Honesty about gaps — required deliverable</i>
10	Limitations & Future Work	1:00	<i>Technical maturity signal</i>
11	Closing	0:30	<i>One sentence on real-world impact</i>

Q&A	Questions	5:00	<i>Depth check — every member answers</i>
----------------	-----------	-------------	---

WHAT YOUR PRESENTATION MUST COVER

This is not a slide template — it is a content checklist. Your team decides how to structure, order, and design your slides. Every item below must appear somewhere in your 15-minute presentation. How you present it is up to you.

Required Area	What Must Be Covered
Problem Framing	Show you understand the real-world challenge — not just the brief. Explain the specific pain point with a concrete example from your chosen country.
Solution Architecture	Explain what you built and why. Cover your data pipeline, AI techniques used (RAG, agents, summarisation, etc.), and at least one key design decision with its trade-off.
Live Demo or Results	Show your system working on your chosen country. A partial working demo outscores a polished static deck. Have a backup (screenshots or recording) ready.
Key Findings & Insights	What you discovered that a manual analyst might miss or take days to find. Include at least one “unknown unknown” — a country-specific risk or constraint not listed in the brief.
Data Availability Audit	Required deliverable. Explicitly state: (a) what data was found and used, (b) what was missing or inaccessible, and (c) how those gaps affect your output. Honesty here is rewarded more than completeness.
Limitations & Future Work	What you would do with more time, better data access, or production infrastructure. Be specific — vague statements like “we could expand to more countries” add no value.

Presentation Principles

- Slides are a visual aid — your voice carries the argument. One clear idea per slide.
- Get to your solution by minute 3. Judges know the domain; do not spend half your time on background.
- Every team member must speak. Judges will direct Q&A questions to members who did not present.
- Fit within 15 minutes. Prepare a hard stop and rehearse at least twice.

- Have a backup plan for your demo — screenshots or a short recording — in case of connectivity or API issues.

COMMON MISTAKES — QUICK REFERENCE

- **Mistake 1:** Too much time on background — judges know the domain. Get to your solution by minute 3.
- **Mistake 2:** Slides-only, no demo. This is a technical hackathon. A working prototype is mandatory.
- **Mistake 3:** Vague architecture ('we used AI to process the data'). Name your techniques.
- **Mistake 4:** Skipping the data audit. It is explicitly required and rubric-scored.
- **Mistake 5:** Running over time. Prepare a hard stop at 15 minutes and practise at least twice.
- **Mistake 6:** Only one team member speaks. Assign slides in advance — everyone presents.

Good luck — build something that would actually work in the field.
